Julie - -

I have a VERY BAD habit of forgetting to include my sample-prep. dilution or concentration factors into Reporting Limits... I did this on the recent round of Morphine Sulfate samples (report attached) – the RL says 0.03mg/mL, the lowest calibrator concentration, but the samples had a DF of 20.8 during preparation, so the RL *should* say 0.624mg/mL... Paul and I will include a lower CAL STD in the future so that most samples will be quantified. Last month's samples were really low and if I hadn't forgotten the sample DF in the RL the report results table would have looked like this: (rather than the last table). Let me know if you need any corrected reports or the samples re-run ... Jill
